Saturday May 19th

Treatment :

**RadioCarpal instability
ScaphoLunate instability
LunoTriquetral instability
Midcarpal instability**

**Acute / Chronic
Arthroscopic / Open**

Algohythm Proposal

Video Flash session

Clinical cases session

For the second time since 2009, Tournai will host in 2018 a congress on carpal ligament surgery. Over the past nine years, the analysis, understanding of instabilities and surgical practice have evolved considerably.

The ligamentous lesion associations have been clarified, and the therapeutical proposals, both arthroscopic and open, attempt to resolve all the lesions encountered. International experts will present their experience and reflection on this unlimited subject.

The congress will be held in the new setting of the Cinéma IMAGIX.

Faculty

Atzei Andrea (I)
Baur Eva Maria (Ger)
